A LEGAL ANALYSIS OF ROMANTIC GIFTS

Ruth Sarah Lee*

ABSTRACT

While many law review articles are devoted to the legal analysis of gifts, this article addresses romantic gifts in particular, to which many legal exceptions apply. In addition to offering a review of the legal economics behind gift-giving, this article is the first to survey the five legal theories of revocability for romantic gifts, as well as an unprecedented new theory recently employed in federal court.

Although the general presumption is that gifts are irrevocable, courts have used five main theories to return romantic gifts to their donors—conditional gift, pledge, consideration, unjust enrichment, and fraud—as well as a new approach which has actually been used recently in federal court: criminal fraud. Criminal fraud is a surprising and unprecedented development because it not only requires the disgorgement of the gifts as the other theories do, but also punishes the donee beyond the cost of the gift. Thus, it is the only theory of revocability that will change the ex ante incentives of the donee.

In the course of discussion, this article will note three economic paradoxes that arise in the context of romantic gifts: (1) non-cash gifts appear on first glance to be extremely inefficient because it involves guessing the desires of donees, but are nonetheless ubiquitous; (2) extremely inefficient gifts tend to be better signaling mechanisms than efficient gifts in romantic relationships; and (3) although one who pursues a relationship blatantly for financial benefits faces more social condemnation than one who tastefully hides her motivations, she or he is actually facilitating a more efficient relationship. This leads to a discussion of when romantic gifts should be revocable, which theories of court interference are the most appropriate, and how courts should craft doctrine in the future. Because of the potential of over-deterrence, courts should only impose punishments that exceed the value of the gift when there is a clear enough information asymmetry between the donor and the donee that it would be impossible for the donor to give his informed consent to the relationship or the gift.

* Law Clerk to the Hon. Richard Suhrheinrich (6th Cir) 2012-2013. I. INTRODUCTION

“If you marry for money, you will earn every penny.” It is an old saying, but it captures a very topical phenomenon:\footnote{Recent studies show that money plays a big role in women’s decisions to marry. See, e.g., Liz Hull, “What Women Really Want: To Marry a Rich Man and Stay at Home with the Children,” DAILY MAIL (Jan. 10, 2011) (“Despite years of equality campaigning and advances for women in the workplace, 64 per cent said they aspire to find a husband who brings home a larger pay packet than they do”).} “gold digging.”\footnote{Both men and women can be gold diggers, although historically, most cases present facts where women are the gold diggers. In my examples, I use gender-specific pronouns for convenience, but the reader may disregard them without loss of generality.} A woman (or man) is a gold digger if she or he pursues a romantic relationship for its material benefits—a quid pro quo, a more-or-less equal exchange of relationship for money or gifts.\footnote{The term “gold digger” is prevalent in pop culture and media, used frequently on television, in movies, as well as in songs. It is the name of a song recorded by American rapper Kanye West, featuring Jamie Foxx, released in 2005. The internet is also filled with gold digger references, from websites that give advice on how to become a gold digger (see e.g., http://www.wikihow.com/Be-a-Gold-Digger), how to avoid gold diggers (see e.g., http://www.askmen.com/dating/doclove_100/138_relationship_expert.html), making fun of gold diggers (see e.g., http://www.snopes.com/love/dating/golddigger.asp), or cataloging famous gold diggers (see e.g., http://www.celebritynetworth.com/articles/entertainment-articles/7-famous-gold-diggers/). The gold digger is also a prominent archetype in literature. See The Book Club, “Archetypes”, Prichett, Farlow & Smith Publishing (Jan. 19, 2012), available at http://www.pfspublishing.com/bookclub/archetypes.html.} On one hand, these relationships occur between private individuals, and their personal affairs should not face too much legal interference. On the other hand, some relationships are so predatory, or so against public policy, that there may be reasons for legal interference.

This article examines gifts given during the course of a relationship—both in relationships where gifts are bilateral and where they are grossly unilateral—and chronicles the way the legal system has responded in different situations. Although this discussion will address opportunism and gold digging, it also applies to good faith gifts given during the course of a relationship, which is something that almost every adult has experienced.
Because gifts usually considered absolute and irrevocable,4 the law needs a good reason to deviate from the standard and interfere with the presumed irrevocability of gifts. This article delineates the five principal theories courts use to counter the presumed irrevocability of gifts in the context of romantic gifts,5 then turns to an unusually punitive sixth theory that has been recently applied in a federal court. The five principal theories are the theories of conditional gift,6 pledge,7 consideration,8 unjust enrichment,9 and civil fraud.10 The first three of these revoke the gift on the general basis that the gift itself is inherently different from the typical gift. Technically, the behavior and moral faults of the parties should not affect the revocability of the gift. The next theory, unjust enrichment, centers not on the nature of the gift, but on the bigger picture and the behavior of both parties—whether there was some inequitable enrichment of one of the parties. The fifth principal theory, fraud, focuses not on the nature of the gift, but on the behavior of the defendant party.

A new approach, which is unprecedented in its severity to the donee, is exemplified by United States v. Saenger from U.S. District Court for the Western District of Washington.11 In the facts leading up to Saenger, Shea Saenger convinced Norman Butler, her elderly boyfriend, to send her over $2 million in the course of their five-year relationship. Butler was suffering noticeably from Alzheimer’s. Saenger was found civilly liable for financially exploiting Butler,

5 “Romantic gifts” will be used as a term referring to gifts given during courtships or engagements. Unless otherwise noted, this article discusses situations where marriage does not ultimately eventuate.
6 See Section III.B.1, infra.
7 See Section III.B.2, infra.
8 See Section III.B.3, infra.
9 See Section III.C, infra.
10 See Section III.D, infra.
11 United States District Court for the Western District of Washington at Seattle, No. CR11-223RAJ. The criminal judgment for this case was issued January 6, 2012. The case is available on PACER.
who was defined as a vulnerable adult under Washington law. However, the civil penalty was not Saenger’s biggest concern: she was subsequently charged with violating the federal mail fraud statute. She pled guilty. As a result, her criminal sentence required 46 months in jail, in addition to the $2,161, 246.67 in restitution. While this article does not argue that Saenger was wrongly decided, it does argue that Saenger is a great departure from the other theories, most notably because Saenger’s penalty transcends return of the gifts and punitive damages.

This article will begin by examining the role of gifts in romantic relationships, by examining first the economic role of gifts in general, then more specifically gifts in trust relationships and romances. The next section explores different ways that courts interfere with gifts given during romantic relationships, including their fixation on the contemplation of marriage. After that, the discussion turns to when a donor becomes a victim, and introduces the interesting and novel case of United States v. Saenger.

Taking a step back, three economic paradoxes are presented about romantic gifts: (1) non-cash gifts appear on first glance to be extremely inefficient because it involves guessing the desires of donees, but are nonetheless ubiquitous; (2) extremely inefficient gifts tend to be better signaling mechanisms than efficient gifts in romantic relationships; and (3) although the more blatant a “gold digger” is about her intentions the more social disapproval she may face, the

12 N. Douglas Butler v. Shea Saenger, Superior Court of the State of Washington in and for the County of Kittitas, No. 10-2-00430-03 (Nov. 22, 2010).
13 See 18 USC 1341.
14 See Saenger Judgment in a Criminal Case, p. 2 and 5. In the civil case, Saenger had already been sent to jail for six months for contempt of court when she pleaded the Fifth. Defendant requested during the Sentencing for credit for time served, which was denied. As a result, Saenger will actually have to stay in jail for 54 months as a result of her fraud. For her crime, the Sentencing Guidelines recommend a sentence of 46 months to 57 months.
more blatant a “gold digger” is, the more efficient the relationship is, and the less likely someone is being victimized.

This leads to a discussion of when romantic gifts should be revocable, and which theories of court interference are the most appropriate. The new theory presented in Saenger is notably powerful because it creates a situation where a potential gold digger might be faced with a negative expected value—this is unprecedented under the five traditional theories of recovery, and will have deterrence effects on relationships if not applied in a manner than can be predicted reliably ex ante. Courts should only impose punishment beyond the value of the gift in cases where there is a clear information asymmetry about the intention of the donee to the extent that the donor is not only considered a victim of the donee, but that it would be impossible for him to give his informed consent to the gifts given the asymmetry.

II. GIFTS GIVEN IN ROMANTIC RELATIONSHIPS

A gift is “[t]he voluntary transfer of property to another made without compensation.” 16 The classical elements of a valid gift are: (1) an intention to give and surrender title to and dominion over the property (i.e. donative intent), (2) delivery of the property to the done, and (3) acceptance by the donee. 17

Gifts are usually categorized as either gifts inter vivos (the voluntary transfer of property by one living person to another living person, without any valuable consideration, which is perfected and becomes absolute during the lifetime of the parties) or gifts causa mortis (a gift made in expectation of the donor’s death and upon the condition that the property will belong to

the donee if the donor dies, as long as it is not revoked in the meantime). While there are some cases about the possession of courtship gifts when a marriage is prevented by the death of one of the parties, this article focuses primarily on gifts inter vivos, where both parties survive but their relationship has ended. Generally, inter vivos gifts are absolute and in order to be valid, they must be irrevocable. However, one area of gift law that noticeably diverges from this standard is for gifts given during courtships or engagements where marriage does not ultimately eventuate.

Commentators have noted that law struggles with the idea of gifts. Since so much of law involves assumptions of rational actors and motives of self-interest, the idea of a completely gratuitous gesture performed out of altruism is slightly disturbing to the legal field, and arouses suspicions. On the other hand, law is much more comfortable with regulating exchanges; that is, reciprocal transfers, where self-interest can safely be assumed. The conventional wisdom,

---

19 Ruehling v. Hornung, 98 Pa. Super. 535, 540 (Pa. Super. 1930) (“We think that it is always given subject to the implied condition that if the marriage does not take place either because of the death, or a disability recognized by the law on the part of, either party, or by breach of the contract by the donee, or its dissolution by mutual consent, the gift shall be returned. It only becomes the absolute property of the recipient if the marriage takes place”); Cohen v. Bayside Fed. Sav. & Loan Ass’n, 309 N.Y.S.2d 980, 983 (Sup. Ct. 1970) (“While it is improbable that at the time of the gift either gave a thought to the consequences that would arise in the event of the death of one of the parties, I firmly believe that had Richard thought of these consequences he would have intended that in the event of his untimely death Carol should keep the ring as a symbol of his love and affection. There appears to be no reason, in logic or morals to prevent such a result.”)
20 See, e.g., Ver Brycke v. Ver Brycke, 843 A.2d 758 (Md. 2004).
21 The article will refer to such gifts as “romantic gifts.”
22 Carol M. Rose, Giving, Trading, Thieving, and Trusting: How and Why Gifts Become Exchanges, and (More Importantly) Vice Versa, 44 FLA. L. REV. 295, 296 (1992) (“In short, however nice it might be to believe in spontaneous gift-giving, gifts seem to have a dangerous edge. When we come to exchange, we can breathe easier. Exchanges do not make us worry about all these ambiguities. . . . Exchanges might not be generous, but at least we can figure out the parties’ motives.”) Professor Rose proceeds to argue that the line between pure gifts and exchanges is not as clear as first appearances may suggest.
23 Robert A. Prentice, “Law &” Gratuitous Promises, 2007 U. ILL. L. REV. 881, 881 (“The refusal to enforce gratuitous promises absent consideration is one of the foundations of contract law. The rationales with which courts and scholars supported this traditionalist view—the evidentiary, cautionary, and channeling functions of consideration—have been framed and analyzed in terms of law and economics. . . [but] they assume that certain factors that limit rational human decision making apply only to gratuitous promises and no bargained-for commercial promises.”)
therefore, is that promises of gifts—which are gestures of altruism, love, or kindness—are unenforceable by law, while contracts are enforceable.

To the extent that gifts—or donative transfers—are regulated by law, the law’s approach focuses on formality rather than substance. The formalities of gift law are largely explained by the development of the law of wills, which involved legal standards set in the 1500s. Indeed, the “most highly developed portions of the law of gift” probably “revolves around wills,” which is “notoriously rigid and suspicious.” This in itself shows the law’s emphasis on self-interest and skepticism about gifts—the law recognizes death as the foremost and most logical reason a person would ever want to give way things for free.

24 Melanie B. Leslie, _Enforcing Family Promises: Reliance, Reciprocity, and Relational Contract_, 77 N.C. L. REV. 551, 563 (1999) (“Consequently, we characterize market activity as blatantly self-interested, in contrast with family life and personal relationships, which supposedly are completely supportive and dominated by acts of altruism and generosity.”)

25 Id. (“Gratuitous promises are unilateral and, according to conventional lore, unenforceable. The well-accepted general rule—that most gratuitous promises are unenforceable—has been justified on various grounds, most notably that the costs of enforcement would far exceed the value that gratuitous promises create.”) See also Richard A. Posner, _Gratuitous Promises in Economics and Law_, 6 J. LEGAL STUD. 411, 414–17 (1977).

26 Jane B. Baron, _Gifts, Bargains, and Form_, 64 IND. L.J. 155, 155-56 (1989) (noting that “gifts and bargains are subject to divergent legal requirements, taught and learned in separate law school courses. Gifts require formalities such as delivery, signature, or attestation, whereas contracts require offer, acceptance and consideration. The divergence between the requirements is, under accepted principles, not arbitrary; rather, it is thought to be a rational response to the respective goals and settings of the two different fields of law. Thus, with respect to gifts, where the primary legal goal is to effectuate donative intent, formalities are said to be required to put that intent beyond question. In contrast, with regard to contracts, where the primary legal goal is protection of expectations and security of transactions, consideration is said to be required to mark off those promises customarily understood, in a market economy, to be binding.”)

27 Id. at 160–61 (“The formalities of the law of donative transfers have a respectable historical pedigree. The modern requirements for a valid will—a writing, signature, witnesses—were codified centuries ago, in the Statute of Wills (1540) and the Statute of Frauds (1677).”) See also Leslie, supra note 25 at 563 (“The unidimensional approach of wills law stems from the threshold characterization of a testamentary transfer as a gift rather than an exchange.”)

28 Rose, supra note 22 at 303.

29 Id.

30 Id. (“In the case of transfers at death, the donor is pretty much stuck. She can’t take it with her, or get anything for it when she goes, and so the only thing she can do is to give it away. On the other hand, we might think that if the donor could take it with her, she probably would; the only reason she makes a ‘gift’ is because she cannot do anything else.”) (emphasis in original).
More recent justifications\textsuperscript{31} for the formalities include the ritual function (“the performance of some ceremominal for the purpose of impressing the transferor with the significance of his statements and thus justifying the court in reaching the conclusion, if the ceremony is performed, that they were deliberately intended to be operative”),\textsuperscript{32} the evidentiary function (to “emphasize the purpose of supplying satisfactory evidence to the court”),\textsuperscript{33} and the protective function (having “the stated prophylactic purpose of safeguarding the testator, at the time of the execution of the will, against undue influence or other forms of imposition.”)\textsuperscript{34}

A. The Economic Functions of Gifts

Recently, there has been an academic trend in law to recognize that gifts and exchanges are overlapping categories, and that the traditional legal distinction may merit further examination.\textsuperscript{35} Much of the ambiguity comes from the question of whether gifts are actually pure and unilateral,\textsuperscript{36} or whether they are exchanges in disguise—not necessarily of goods, but of some other interests.\textsuperscript{37} The examination of gifts as exchanges raises the question of what is being given from the donee to the donor in return for the gift.

\textsuperscript{32} Gulliver & Tilson, supra note 31 at 4.
\textsuperscript{33} Id.
\textsuperscript{34} Id. at 4–5. These justifications are not necessarily accepted and have been critiqued by commentators. See, e.g., Andrew Kull, Reconsidering Gratuitous Promises, J. LEGAL STUDIES, Vol. 21, No. 1 (Jan., 1992), pp. 39–65.
\textsuperscript{35} See Baron, supra note 26 at 168 (“There is no denying the popularity and appeal of Mechem's and Gulliver and Tilson's formulation. . . . Yet little attention has been paid to the assumptions underlying their argument. These assumptions are critical. The functional explanation asserts that ritual, reliable evidence, and protection (which are usually supplied by formalities, but which may be supplied by other means) are necessary.”) See also Rose, supra note 22 at 303, 315 (“Indeed, it is just in these special showings that we can see how the gift category gets swallowed up by exchange on the one hand, and by larceny on the other.”) Rose also argues that exchanges involve incomplete gifts.
\textsuperscript{36} See, e.g., Rose, supra note 22 at 208 (“Does anybody really ever give anything away, in the sense of sheer niceness, making the voluntary, unilateral transfer?”)
\textsuperscript{37} See Baron, supra note 26 at 194 (noting that for disciplines such as anthropology, sociology, and psychology, “gifts are exchanges. They are not necessarily exchanges of goods, and they are distinct in important
Giving a gift might “be a step toward forming a new relationship or strengthening an established one, or the act might simply confer a boost to the self-image or an increased sense of well-being.” In addition to altruism and status-enhancement, Eric Posner suggests that a reason of gift-giving is “to create, enhance, or reaffirm relations of trust.” Trust is an important legal consideration in family law, as well as in business relations and politics. Thus, gift-giving serves a signaling function in the context of relationships.

When a romantic gift is given, it can be a way of showing that a long-term relationship is expected. If the donor expected only a short-term relationship with the donee, he would not expect enough in return, in terms of affection or trust, for the gift to be worth its cost. Because the cost of gift-giving exceeds any short-term gain, it would be difficult for an opportunist to copy this behavior. This is the sign of a good signal.

A good gift can also be a signaling device in another way, by demonstrating that the donor has “developed expertise” about the donee’s interests and tastes. Only a donor planning a long-term relationship with the donee would invest in such expertise. The value of this type of expertise is why personalized gifts—books about the donee’s favorite subject, clothes from the...

donee’s favorite store, music the donee is known to enjoy, a bottle of the donee’s signature scent—tend to be better gifts than generic pre-packaged flowers or candy.  

B. Gifts Given in Trust Relationships

As signals, different gifts can be further distinguished. The gifts given during a romantic relationship can be categorized as either gifts given in a ritual, or as gifts given “as part of the loose quid pro quo in a trust relationship.” A ritualized gift is formal, often based on custom, and not clearly value-maximizing; for example, the gift of an engagement ring upon proposal. The other sort of gift, known as an “exchange gift”, is “best understood as any transfer from one party in a trust relation to the other, which benefits the donee by more than it costs the donor,” and are “motivated by a desire to obey the terms of the relationship so as to continue to benefit from it.” Unlike ritualized gifts, which are usually given at specific times, exchange gifts are given whenever the occasion arises.

Professor Posner has argued that the “proper legal approach to a trust-enhancing gift depends on whether the gift is meant to signal a desire to enter or enhance a relationship of trust or is made to benefit the donee pursuant to a relationship of trust.” The former type of gift is usually characterized “by the fact that usually they cost the donor more than they benefit the done.” The latter type of gift, the “exchange gift”, will be jointly maximizing: they will cost the donor less than they benefit the donee. Although “exchange gifts” are not gifts “in the sense that

---

44 Id. at 580–81 (“So a good gift—one that reveals that the donor has a deep understanding of the donee—is a reliable signal that the donor is a cooperator. And money could never be such a gift, since a gift of money requires no knowledge about the donee’s tastes and personality.”)
45 Id. at 581. Professor Posner calls the “ritualized gift” a “signaling gift”, but the definition is the same. I have chosen to use “ritualized gift” to avoid confusion because both ritualized gifts and exchange gifts have the signaling properties—of investment and expertise—discussed in the preceding paragraph.
46 Id. at 582–83.
47 Id.
48 Id. at 603.
49 Id.
each party implicitly agrees ex ante to engage in all jointly-maximizing actions,” the look like gifts because the “quid pro quo is invisible.”

Ritualized gifts may result in very inefficient equilibria—“too many people give gifts, or very expensive gifts, in order to avoid the risk of being though untrustworthy.” But the efficiency of the equilibrium is beyond the abilities of most courts to determine, so the traditional refusal to enforce gratuitous promises or revoke gratuitous transfers seems to make sense. Because exchange gifts are economically valuable, they should not be discouraged by courts.

The question of non-discouragement is different from the question of enforcement. On one hand, the exchange gift is part of an indefinite relational exchange, and the consideration doctrine does not allow courts to enforce indefinite relational exchanges. They are too vague, and the rationale is that systematic non-enforcement is preferable to uncertain judicial enforcement of vague terms.

The idea of gifts as signals, as well as the distinction between ritualized gifts and exchange gifts, becomes important as we consider romantic gifts specifically.

III. WHEN ROMANTIC GIFTS ARE REVOCABLE

Several judicially-created theories have emerged from the case law in dealing with the return of romantic gifts. For the purposes of this article, a “romantic gift” is a gift that the donor gives the donee while the donor and the donee are either engaged or in a time of courtship. Unless otherwise noted, “revocability” refers to whether a court will allow the donor to take the gift back if the donor sues the donee for the gift after the dissolution of the relationship.

50 Id. (adding that the “looseness of the arrangement, however, should not conceal the definite economic value of this relationship to both parties.”)
51 Id. (citing the “extravagant treatment of summer associates by law firms during the late 1980s” as an example of the phenomenon).
52 At least it makes sense to Professor Posner. Id. at 604–605.
53 Id. at 606–607 (“Similarly, courts resisted enforcing firm offers and requirement contracts not because they were socially undesirable, but because, like gift exchanges, they were vague.”)
There are five principal court-crafted theories of revocability for romantic gifts. These theories are conditional gift,\textsuperscript{54} pledge,\textsuperscript{55} consideration,\textsuperscript{56} unjust enrichment,\textsuperscript{57} and fraud.\textsuperscript{58} A common strand running through all of these theories is the importance of the promise of marriage—while not every single court will rule against the party who promised marriage but breached,\textsuperscript{59} most courts do take into account, at least rhetorically, whether marriage was contemplated.

It will become apparent that the theories of unjust enrichment and fraud differ from the other theories in their stronger emphasis on fault of the donee. Theories like conditional gift theory,\textsuperscript{60} pledge theory,\textsuperscript{61} or consideration theory,\textsuperscript{62} will mandate the return of the gift on a basis other than fault of the donee. However, the theories of unjust enrichment and fraud not only focus on the wrongdoing of the donee, but are also moral judgments.\textsuperscript{63}

The next section begins by exploring the role of promise of marriage, generally, when courts examine revocability. Then the five different theories are examined in more detail.

A. The Role of Promise of Marriage

1. Common Law Emphasis

Not every gift given between significant others are given with marriage in mind. Some couples are too early in their relationship, others mutually understand that the relationship is

\begin{footnotesize}
\begin{itemize}
\item See Section III.B.1, infra.
\item See Section III.B.2, infra.
\item See Section III.B.3, infra.
\item See Section III.C, infra.
\item See Section III.D, infra.
\item See Section III.A, infra.
\item See Section III.B.1, infra.
\item See Section III.B.2, infra.
\item See Section III.B.3, infra.
\item Fraud is fault-based on its face. Unjust enrichment is not always fault-based, for example, in a situation where the plaintiff accidentally deposits money into the defendant’s bank account, and then sues under a theory of unjust enrichment. However, in the context of engagement gifts, the analysis is very often fault-based, and courts that apply unjust enrichment will look at the donee’s behavior in order to justify a finding of unjust enrichment in the context of the relationship. See Part III.C, infra.
\end{itemize}
\end{footnotesize}
strictly short-term and commitment-free, and others do not contemplate marriage for other reasons. While courts could have chosen to ignore the contemplation of marriage as an element to consider in the context of gift-giving (and instead, focus on things like fault, value of the gift, or the words of the explicit agreement), history reveals otherwise.

Courts often place a very high emphasis on the role of the contemplation of marriage in the context of courtship gifts. For example, consider the court’s language in *Sharp v. Kosmalski,*64 which Emily Sherwin prominently uses as an example of an unjust enrichment case65:

Plaintiff came to depend upon defendant's companionship and, eventually, declared his love for her, proposing marriage to her. Notwithstanding her refusal of his proposal of marriage, defendant continued her association with plaintiff and permitted him to shower her with many gifts, fanning his hope that he could induce defendant to alter her decision concerning his marriage proposal. Defendant was given access to plaintiff's bank account, from which it is not denied that she withdrew substantial amounts of money.66

Indeed, courts often begin their analysis of a dispute by considering whether a gift was made “in contemplation of marriage.”67 Gifts “made to promote the donor’s suit but where the donee has made no promise to marry” are “ordinarily regarded as absolute, and cannot be recovered,” while gifts made in contemplation of marriage is made conditionally on the prospect of marriage.68

Although courts generally do not articulate why marriage is such an important consideration,69 there may be several reasons why contemplation of marriage has become so important. First is history. This does not tell us much, beyond the general assertion that courts

---

66 *Sharp*, 351 N.E.2d at 722.
68 *Somple v. Livesay*, 1979 WL 207444 at *1 (OH App. 7th Cir. 1979).
have traditionally respected marriage as a pseudo-spiritual ritual to be held in high regard.\textsuperscript{70} The courts might also use contemplation of marriage as a proxy for determining the seriousness of the parties in the relationship. When a couple begins talking and thinking about marriage—whether it is within the first few weeks of their relationship or after several years—this is a sign that both parties are somewhat committed and care about the relationship. Because different relationships move at different speeds, contemplation of marriage might be a usable proxy for an outside party—the court—to gage how far the relationship has progressed.

2. The Role of Marriage in the Theories of Revocability

It is notable, too, that while contemplation of marriage plays a key role in courts’ language concerning these cases, it plays a different role in unjust enrichment and fraud cases than in the other, less fault-based, theories. In unjust enrichment and fraud, contemplation of marriage is often used to show the existence of fault—the donee purposefully used marriage as bait in order to receive their gifts.\textsuperscript{71} In addition, the contemplation of marriage rhetoric is used to evoke sympathy for the donor and implies honorable intention of the donor.\textsuperscript{72} In contrast, when contemplation of marriage is used in the less fault-based theories (conditional gifts, pledge, consideration), contemplation of marriage is a prerequisite to the theory—for example, that the gift was given with marriage as a condition, that the pledge was for marriage, that the consideration was marriage—but not used to show fault or wrongdoing.\textsuperscript{73}

This distinction—the different role that contemplation of marriage plays in unjust enrichment and fraud versus the less fault-based theories—will ultimately affect that analysis of what the best response in the most egregious cases. For example, when a woman very blatantly

\textsuperscript{71} See Sections III.C and III.D, infra.

\textsuperscript{72} \textit{Id.}

\textsuperscript{73} \textit{Aronow v. Silver}, 233 N.J.Super. 344, 347 (Ch. Div. 1987) (citing \textit{Albanese v. Indelicato}, 25 N.J. Misc. 144 (D. Ct. 1947)).
and extravagantly takes advantage of an older man, whether or not he wants to marry her—and whether or not she leads him on—might influence the empirical determination of whether she is defrauding him, or whether they are mutually benefiting in an agreeable arrangement.  

B. Non-Fault-Based Theories of Recovery

1. Conditional Gifts

The predominant theory, and also the most famous theory, used in recovering engagement gifts to the donor is the theory of conditional gifts. Courts applying conditional gift theory would return the gift to the donor, holding that it “does not matter who broke the engagement. A person may have the best reason in the world for so doing. The important thing is that the gift was conditional and the condition was not fulfilled.”

Another court has whimsically described conditional gift theory in the following way:

A gift given by a man to a woman on condition that she embark on the sea of matrimony with him is no different from a gift based on the condition that the donee sail on any other sea. If, after receiving the provisional gift, the donee refuses to leave the harbor,—if the anchor of contractual performance sticks in the sands of irresolution and procrastination—the gift must be restored to the donor.

Conditional gifts do not need to be explicitly conditional. Courts have found gifts to be “impliedly conditional” in cases where the couples have not designated them explicitly. The stereotypical example of the impliedly conditional gift is the engagement ring, which is said to

---

74 See Section IV.A, infra.
75 Id.
77 See, e.g., Fierro v. Hoel, 465 N.W.2d 669, 670 (Iowa Ct. App. 1990); Beck, 262 N.Y.S. at 718.
be a gift conditional on the subsequent eventuation of marriage. But sometimes courts have imputed the same condition for other types of gifts, including money.\textsuperscript{78}

Not every court has found engagement gifts to be implicitly conditional upon the fulfillment of marriage,\textsuperscript{79} but the idea of a conditional engagement gift is widely acknowledged, if not accepted.\textsuperscript{80}

2. Pledge

Another way courts have made engagement rings revocable to the donor is by characterizing them as symbols or pledges “of the contract to marry,” so when the engagement ends, the ring is returned to the donor.\textsuperscript{81} Under this theory, possession of the ring “should be retained during the engagement, which it symbolizes, and is changed into firm ownership, upon marriage. When the engagement fails, the symbol of its existence should be returned to him who gave it.”\textsuperscript{82}

Revocability under pledge theory operates similarly to revocability under conditional gift, because in both cases, the gift would be returned to the donor if the marriage does not eventuate. But one key difference is that conditional gift theory applies to more than just engagement rings, whereas pledge theory generally only applies to engagement rings. Another key difference, theoretically, is that a conditional gift is a gift \textit{conditioned} upon marriage, whereas a pledge gift is a gift that \textit{symbolizes} the marriage.

\textsuperscript{78} McLain v. Gilliam, 389 S.W.2d 131, 132 (Tex. Civ. App. 1965) (“In Williamson v. Johnson, 62 Vt. 378, 20 A. 279, 9 L.R.A. 277, 22 Am.St.Rep. 117 it was held that a gift by a man to a woman, in expectation of marriage, of money to enable her to purchase her marriage wardrobe and to defray her expenses in going to his home to be married, was conditional, and entitled him to recover the money back upon her failure to fulfil [sic] the engagement, although he attached no conditions to the gift and had no expectation that the money would ever be refunded.”)

\textsuperscript{79} See, e.g., Linton v. Hasty, 519 NE.2d 161 (Ind. App. 1998) (finding that because there was no express condition that a ring given from the donor to the donee was conditioned upon marriage, the donor was not entitled to reclaim the ring when the relationship ended).

\textsuperscript{80} See, e.g., Crowell v. Danforth, 609 A.2d 654 (Conn. 1992); Lafontain v. Hayhurst, 36 A 623 (Me. 1896). See Beck, 262 N.Y.S. at 718 (“Such a ring is a symbol hallowed by social usage. That it is a conditional gift seems inherent in its very purpose.”)

\textsuperscript{81} See also McIntire v. Raukhorst, 858 N.E.2d 456, 458 (Ohio App. 1989) (“Namely, the ring is a symbol of a pledge to marry.”)
3. Consideration

Considering the oft-stated dichotomy of gifts versus contracts, it is not surprising that when courts want to diverge from the usual practice of irrevocability for gifts, they would invoke the language of contract. A few cases have recognized the gift as consideration for the contract to marry. When the marriage does not eventuate, the contract has been breached, and the engagement gift should be returned to the donor.

In Lambert v. Lambert, the defendant promised to marry the plaintiff, who gave her an organ, a sewing machine, and his sole estate, which was a farm. When she failed to actually marry him, he sued her, claiming that “her promise to marry him was only an artifice and device to get his property.” He requested that the court return to him his farm, the organ, and the sewing machine. The Court found that the organ and the sewing machine were given to the defendant “in payment for services” (although suggestively failed to clarify what the services were, exactly). However, for land transfer, the Court found differently:

[T]he conveyance of the land was made upon the faith of marriage and that the same was its sole consideration. . . . Admissions proved to have been made by defendant, many of which are not denied by her, show that an engagement to marry existed between her and the plaintiff. . . . It is established by evidence,

---

83 See supra Section II.A.
84 Rockafellow v. Newcomb, 57 Ill. 186, 191 (Ill. 1870) (“A marriage contract, then, was made. It was a contract which was valid and effectual in law. Marriage is a valuable consideration. . . . The promise to marry formed the consideration for the deed. The refusal to marry destroyed the consideration. [Therefore, the gift] is wrongfully withheld from the rightful owner.”) See also Schultz v. Duitz, 69 S.W.2d 27, 30 (Ky. 1934) (“Perhaps originally the engagement ring was only a custom evidencing the relations the parties had assumed toward each other, and had but little, if any, contractual significance. But in modern ages it has developed into more than a mere custom or symbol, and has become a part of the real consideration of the contract”). Although the typical remedy for breach of contract is expectation damages, in these marriage contract contexts, expectation damages are clearly unreasonable. Instead of forcing the parties into marriage, courts make the donee return the gift. See Yubas v. Witaskis, 95 Pa. Super. 296, 300 (Pa. Super. 1929) (noting that it “is well settled in Pennsylvania that an infant cannot retain the consideration received under his contract and also recover the value of the consideration given by him. It is his duty first to offer at least to restore the status quo” and making the defendant return the ring.)
86 Id.
87 Id.
88 Id. The court does not clarify if this is a musical organ or a biological organ, but I would like to assume it is the former.
89 Id.
which is reasonably clear and certain, that the real consideration for the deed [of the plaintiff’s estate] was marriage.\textsuperscript{90}

Since \textit{Lambert}, a few more recent cases have used the consideration rhetoric as well.\textsuperscript{91} However, in many states, statutes have been passed that cast the validity of this theory into question, so that the idea of marriage itself being consideration for a contract is now considered antiquated.\textsuperscript{92}

4. Statutory Issues

Conditional gift, pledge, and consideration are all common law revocation theories developed by courts. But some states have passed statutes that explicitly address the revocability of engagement gifts. For example, in California:

Where either party to a contemplated marriage in this State makes a gift of money or property to the other on the basis or assumption that the marriage will take place, in the event that the donee refuses to enter into the marriage as contemplated or that it is given up by mutual consent, the donor may recover such gift or such part of its value as may, under all of the circumstances of the case, be found by a court or jury to be just.\textsuperscript{93}

This is basically a statutory unjust enrichment provision allowing revocability where the donee would be unjustly enriched by the gift. Unjust enrichment is addressed in the next section.

Another statutory consideration is that many states have passed so-called “heart balm” acts, which abolish the common law right of action for breach of promise to marry. At least twenty-eight states and the District of Columbia have passed these acts.\textsuperscript{94} These statutes do not

\textsuperscript{90} \textit{Lambert}, 66 S.E. at 690 (emphasis added).
\textsuperscript{91} \textit{See, e.g., Vigil v. Haber}, 888 P.2d 455 (N.M. 1994).
\textsuperscript{92} \textit{See text accompanying notes 94–95, infra.}
\textsuperscript{93} Cal. Civ. Code § 1590 (West).
necessarily bar recovery for gifts given during the engagement under different theories.\textsuperscript{95}

However, they have been used by defendants’ attorneys to suggest that the consideration theory of revocability is untenable.\textsuperscript{96}

Regardless of the statutes, courts continue to struggle with whether engagement gifts should be revocable, and continue to consider whether there was contemplation of marriage, and disfavor the party who prevented the marriage.

C. Unjust Enrichment

Unjust enrichment may be the most honest of all the theories of recovery. This is because the previously discussed non-fault-based theories of revocability (conditional gift, pledge, consideration) are judicial constructions or legal fictions—imputing meaning in the gift; holding that as a matter of law, that the gift represents something; or constructing an abstract contract that the parties allegedly entered into. The other theory to be discussed next—fraud—is often difficult to prove, and requires some divination of the parties’ mind sets and inner thoughts. But unjust enrichment is the most straightforward explanation for why, in certain cases, we want to return the gift to the donee.

We could even argue, perhaps, that unjust enrichment is the heart of the theories of revocability—that conditional gift, pledge, and consideration are all inventions designed to prevent unjust enrichment of the donee at the expense of the donor. However, because courts

\textsuperscript{95} See, e.g., \textit{Piccininni v. Hajus}, 429 A.2d 886 (Conn. 1980) (ruling that a suit to recover an apparent engagement gift of money was not the type of suit prevented by Connecticut’s Heart Balm Act); \textit{De Cicco v. Barker}, 159 NE.2d 534 (Mass. 1959) (ruling that because the proceeding was one not to recover damages for the breach of contract to marry, but to obtain, on equitable principles, restitution of property held on a condition, the suit could move forward).

\textsuperscript{96} See \textit{id}.  

operating under the other theories of revocability do not always admit to applying unjust enrichment, and also because courts often apply unjust enrichment as a theory by itself, it is categorized as a separate theory of revocability.

A person is “enriched” if he has received a “benefit,” and he is “unjustly enriched” if the “retention of the benefit would be unjust.” Usually the “measure of restitution is the amount of enrichment received,” except for in special cases, and only if the “loss suffered” by the donor “differs from the amount of benefit received.” This is the major, pragmatic way that unjust enrichment theory differs from fraud—under unjust enrichment, the plaintiff usually may only recover what was transferred as a gift. There is no extra punishment or award. However, under fraud, discussed in the next section, the donor will be able to recover more than the gift.

1. The Application of Unjust Enrichment

Courts have held that the donor may be entitled to recover the engagement gift at the dissolution of the relationship if it is necessary to prevent unjust enrichment. Some courts prefer unjust enrichment over fraud, because under unjust enrichment, there is no need to “examine the minds of the parties and determine their sincerity.” Unjust enrichment might also be preferable in cases where undue influence is difficult to prove.

Courts are hesitant to mind-read, but they do not need to restrain themselves from judging the actions of the donee. Although bad behavior of the donee is not necessary for a

98 Id.
99 See Section III.D, infra.
100 Wilson v. Dabo, 461 N.E.2d 8, 9 (Ohio App. 3d 1983) (“Although some courts have predicated recovery of property transferred in contemplation of marriage on a theory of fraudulent representations, we think the better view permits recovery based on the equitable principle of unjust enrichment.”)
101 See, e.g., Sherwin, supra note 65 at 2090 (explaining that in Sharp, 40 N.Y.2d 119, “rather than try to assimilate the case to the doctrine of undue influence, the court simply determined that an unjust enrichment had occurred.”)
showing of unjust enrichment,\textsuperscript{102} it is often helpful in the context of romantic gifts. Courts have found unjust enrichment in cases where the donee is married to another man and committing adultery with the donor,\textsuperscript{103} where the donee wrongfully terminated the relationship,\textsuperscript{104} or where the donee was intentionally “fanning [the] hope” the marriage while being “showered” with gifts.\textsuperscript{105} Although unjust enrichment cases, unlike fraud cases, do not turn on the bad conduct of the donee, courts often use bad conduct to reach their conclusion of “unjust.”

As a side note, unjust enrichment is still a viable remedy in many states because courts have often found that heart balm acts do not prevent gift recovery suits from going forward under unjust enrichment.\textsuperscript{106} However, unjust enrichment is not applied by every state—some courts have been hostile to theories of unjust enrichment, preferring other theories, like conditionality of the gift, instead.\textsuperscript{107}

2. \textit{Sharp v. Kosmalski}

\textit{Sharp} is a case that illustrates several of the unjust enrichment principles discussed above.\textsuperscript{108} The donor in Sharp was a 56-year-old farmer with little education, and the donee was a

\textsuperscript{102} For example, if A accidentally deposits $100 in B’s bank account, B will be held to be unjustly enriched, even if he has done no wrong.

\textsuperscript{103} See, e.g., \textit{Witkowski v. Blaskiewicz}, 615 N.Y.S.2d 640, 642 (Civ. Ct. 1994) (“Such a result is even more egregious when the donee is the one... married, holds herself out as engaged, cohabitates with the donor for a significant period of time and solicits the donor’s assistance in securing a divorce. It would appear that whatever social policy the court attempts to establish for the society at large should not prevail where the result would be unjust enrichment for one of the parties.”)

\textsuperscript{104} Restatement (First) of Restitution § 58 cmt. c (1937) (“If there is an engagement to marry and the donee, having received the gift without fraud, later wrongfully breaks the promise of marriage, the donor is entitled to restitution if the gift is an engagement ring, a family heirloom or other similar thing intimately connected with the marriage, but not if the gift is one of money intended to be used by the donee before the marriage.”)

\textsuperscript{105} \textit{Sharp}, 40 N.Y.2d at 120.

\textsuperscript{106} See, e.g., \textit{Gikas v. Nicholis}, 71 A.2d 785, 786 (N.H. 1950) (“It was not the intention of the New Hampshire Legislature in outlawing breach of promise suits to permit the unjust enrichment of persons to whom property has been transferred while the parties enjoyed a confidential relationship. To so construe the statute would be to permit the unjust enrichment which the statute is designed to prevent.”)

\textsuperscript{107} See \textit{Hooven v. Quintana}, 618 P.2d 702, 703 (Colo. App. 1980) (“Hence, the trial court erred in applying the doctrine of unjust enrichment. ... As to amounts paid by [plaintiff] subsequent to the dissolution, these amounts may be awarded. ... if the court finds that the amounts were paid conditioned upon a subsequent marriage.”)

\textsuperscript{108} \textit{Sharp}, 40 N.Y.2d at 120. See also Sherwin, supra note 65.
school teacher who was 16 years younger than him.\textsuperscript{109} She became his “frequent companion,” and eventually he “declared his love for her, proposing marriage.”\textsuperscript{110} Although she refused his proposal, she “continued her association” with him and “permitted him to shower her with many gifts, fanning his hope that he could induce” her to change her mind about marriage.\textsuperscript{111} This culminated in the plaintiff giving the defendant full access of his bank account and naming her the owner of his farm.\textsuperscript{112} Sometime after that, the defendant “abruptly” ended the relationship with the plaintiff and made him leave his farm and home, leaving him with nothing but $300 in all.\textsuperscript{113}

Using flowery language about trust and honor, the Court found that there was “a relationship of trust and confidence” between the parties, and that the defendant abused the “degree of dependence” the plaintiff had upon her “trust and honor.”\textsuperscript{114} The Court then took the initiative of disagreeing with the lower court finding that there was no unjust enrichment:

The Trial Judge in his findings of fact, concluded that the transfer did not constitute unjust enrichment. In this instance also, a legal conclusion was mistakenly labeled a finding of fact. . . . Therefore, the case should be remitted to the Appellate Division for a review of the facts. . . . This case seems to present the classic example of a situation where equity should intervene to scrutinize a transaction pregnant with opportunity for abuse and unfairness. It was for just this type of case that there evolved equitable principles and remedies to prevent injustices. Equity still lives. To suffer the hands of equity to be bound by misnamed ‘findings of fact’ which are actually conclusions of law and legal inferences drawn from the facts is to ignore and render impotent the rich and vital impact of equity on the common law and, perforce, permit injustice. Universality of law requires equity.\textsuperscript{115}

The implication here is clear: the Court suggests that the plaintiff is a sophisticated woman who took advantage of a poor, humble, love-struck farmer and financially destroyed him. There is a

\begin{itemize}
\item \textsuperscript{109} Sharp, 40 N.Y.2d at 120.

\item \textsuperscript{114} Id. at 121–122.
\item \textsuperscript{115} Id. at 123 (emphasis added).
\end{itemize}
strong element of blame involved, as well as an emphasis on the deception or betrayal present in the case—regardless of the fact that this was not a fraud case. This is one advantage of unjust enrichment: it allows courts to return the gift to the donor where there is not enough evidence to establish the intent necessary for a finding of fraud, but where the actions of the donee may be judged.

The correct result, in this case, at least implied by the Court, is to return the gift (the farm) to the plaintiff through a trust because the defendant was unjustly enriched by her devious, flirtatious ways. Unjust enrichment cases often do contain morally indignant rhetoric, and the court in Sharp was clearly disgusted by the donee’s behavior. As a result, the gift was returned to the donor.

D. Civil Fraud

In Sharp, the court expressed dismay at the donee’s behavior and found that she was unjustly enriched by the donor’s gifts. The remedy would be for her to return the gifts. However, as we consider fraud as a theory of revocability, we should keep in mind that the penalty for the donee under fraud may possibly exceed the value of the gift.

Cases involving fraud often read like stereotypical soap-opera stories: they involve some reincarnation of a greedy, beautiful woman who preys on well-meaning men and leaves them penniless. Courts sententiously describe donees as having “prepossessing appearance, and more than ordinary shrewdness,” “entic[ing]” donors by their “female arts, false professions of love

---

116 Id. at 121–122. The fact that the Court highlights the disparity in education between the plaintiff and the defendant also shows that the Court is taking into account the disparity in sophistication between the two parties, which suggests undertones of fraud to this unjust enrichment determination.

117 Sherwin, supra note 65 at 2090 (explaining that in Sharp, 40 N.Y.2d 119, “rather than try to assimilate the case to the doctrine of undue influence, the court simply determined that an unjust enrichment had occurred.”)
and affection, false statements of her property and financial prospects, and fraudulent promises of marriage,” overwhelming the donors’ “ordinary good sense.”

Of course, the gender roles may also be reversed. In Hill v. Thomas, the court found that the donee “made his promise” to marry the donor “fraudulently ‘for the sole and only purpose of the making, executing and delivery’ of [a] deed by her to him. . . his sole purpose—a fraudulent purpose—in making the promise was simply to secure the deed.” Because the donee “had no intention, or purpose, at the time [the promise] was made to perform it,” there were sufficient pleadings for fraud.

1. Fraud and the Contemplation of Marriage

Like all of the other theories, courts invoking the theory of fraud also discuss contemplation of marriage throughout their opinions. For example, one court emphasizes that the plaintiff was “anxious to make defendant his wife until she repeatedly and finally refused to marry him” so he gave her an interest in his property to end his “illicit” cohabitation with her and join her “in one that would be legal and respectable.” The court found fraud and ruled favorably for the plaintiff.

---

118 Douthitt v. Applegate, 6 P. 575 (Kan. 1885). The court uses all of these phrases under the heading “Findings of Fact.” Specifically, the Court determined that “for the sole and only purpose of obtaining plaintiff’s property, defendant induced and enticed plaintiff to visit her at her house, and there, by female arts, false professions of love and affection, false statements of her property and financial prospects, and fraudulent promise of marriage, so infatuated the plaintiff that from time to time, during the years of 1881 and 1882, she caused plaintiff to convert his personal property into money, to the amount of over one thousand dollars, and pay it to her, and also caused plaintiff to convey to her the land above described, which was all the property, except a small amount of personal property, which plaintiff had.” *Id.*

119 140 S.W.2d 875 (Tex. Civ. App. 1940).

120 *Id.* at 877.

121 *Id.* (“It would be a mockery of logic to hold that the testimony of appellee did not raise the issue that appellant’s promise to marry her was fraudulently made for the sole purpose of securing her property, and with no intention, at the time the promise was made, to perform it. The judgment of the court clearly has support in the evidence.”)

122 Janes v. Goyne, 182 P.2d 231, 233 (Cal. App. 2d 1947). *See also Weber v. Bittner, 75 Pa. D. & C. 54, 57-58 (Com. Pl. 1950) (noting the allegation “that defendant, Edward C. Bittner, fraudulently induced her to convey to him, on November 21, 1946, the real estate so occupied by them. We have an issue of facts raised by the pleadings, and for this reason also the preliminary objections may not be sustained.”)*

123 Janes, 182 P.2d at 233.
This is a common theme in the fraud case law for engagement gifts—the fraudulent promise is almost invariably a promise of marriage made by the donee to the donor. For example:

Repeatedly during the time they lived together defendant promised to marry plaintiff and finally when she became insistent that he do so, he said he would when she put the title to the property in their names jointly. In 1946, in order to show her readiness ‘for sacrifice,’ plaintiff went to a notary public and signed a purported deed in which the property was placed in the name of plaintiff and defendant as joint tenants. In February 1947, the property was sold and plaintiff gave defendant half of the proceeds of the sale in consideration of his promise to marry her. Defendant admitted that he did not at any time intend to marry plaintiff and on February 2, 1948, plaintiff left defendant and thereafter demanded return of the money which she had given him in consideration of his promise to marry her.124

The court in this case found that the plaintiff met “the burden of proof of showing fraud by clear and convincing evidence,”125 a standard higher than that of preponderance of evidence.

The focus on promises of marriage makes sense because “where the cause of action is predicated upon the use of promise to accomplish a fraudulent purpose, the complaining party must allege and prove that, at the time the party gave the promise, there was no intention on his part to perform it.”126 That promise is usually of marriage.127 However, the importance of contemplation of marriage transcends its mere role as an element of the offense, but often frames the entire offense. This is demonstrated by the fact that the inverse is true as well; that is, when it is the donor who refuses to marry and the donee who wants to marry, the court will find no

124 Mack v. White, 218 P.2d 76, 78 (Cal. App. 2d 1950) (emphasis added). See also note 111, supra, and accompanying text.
125 Id.
126 Hill v. Thomas, 140 S.W.2d 875, 877 (Tex. Civ. App. 1940) (agreeing with the appellant’s interpretation of the law on this point.)
127 See id. See also Anderson v. Goins, 187 S.W.2d 415, 416 (Tex. Civ. App. 1945) (affirming a finding of fraud by noting that “said acts were done and said promises made without any intention at the time on the part of the mother and daughter, or either of them, that Dollie Anderson would consummate said marriage with appellee, or that said deed would be returned on her failure to marry him”); Burke v. Nutter, 91 S.E. 812, 813 (W. Va. 1917) (“If the money was a gift, it was made in consideration of marriage, and was fraudulently obtained, according to defendant's own admission, and it would be unconscionable to allow her to retain it after having broken her contract to marry plaintiff.”)
26
evidence of fraud, even when the gift is similar in value to other cases where fraud is found and where the donor alleges other misrepresentations made by the donee.128

2. Fraud and Unjust Enrichment

Almost any award that is made under the theory of fraud may also be made under unjust enrichment; unjust enrichment occurs when a defendant has been enriched by her perpetration of fraud. This is supported by case law.129 Some cases include strands of both fraud and unjust enrichment.130

3. Fraud and Heart Balm Acts

The heart balm acts generally has not been interpreted to prohibit plaintiffs from suing under theories of fraud.131 Courts explain that because an action suing for the return of a gift “is not one for breach of promise to marry but is an action for obtaining money upon fraudulent representations. Hence [the heart balm act] has no application.”132

E. Summary of Theories of Revocability

Below is an organizational summary of the theories of revocability for romantic gifts. The first five columns have been discussed supra.

The last column, criminal fraud, will be discussed in the next section of this article. Criminal fraud is a surprising and unprecedented development because it not only requires the

128 Pass v. Spirt, 35 A.D.2d 858 (N.Y.S.2d 1970) (“Appellant failed to prove any fraudulent misrepresentations or promises of marriage by respondent, or the other elements of fraud. . . . The evidence supports the conclusion that it was the respondent who urged marriage during the entire period of their relationship, but the decedent [represented by appellant] consistently refused to set the date.”)

129 See, e.g., McElroy v. Gay, 22 So. 2d 154, 154 (Fla. 1945) (“Indeed, this would seem to be all the more reason why the deluded victim of the female's importunities should have relief in an equity forum, a remedy at law not being available under the circumstances. . . . If the deed was procured by the means alleged the defendant has no right either in morals or law to retain the fruits of her fraud.”)

130 See, e.g., id.

131 See, e.g., Norman v. Burks, 209 P.2d 815, 816 (Cal. App. 2d 1949) (“Plaintiff brought his action for recovery of the house and furnishings and the ring on the theory that the defendant took them in consideration of her promise to marry him; that her promise was fraudulently made, and that she holds the property for his use and benefit. . . . Defendant's suggestion that this is a heart balm action and barred by Section 43.5 of the Civil Code is without merit.”)

132 Mack, 218 P.2d at 78. See also Norman, 209 P.2d at 816.
disgorgement of the gifts as the other theories do, but also punishes the donee beyond the cost of the gift.

IV. WHEN DOES A DONOR BECOME A VICTIM?

The remedies provided by the theories of revocability discussed in Section III are generally limited to the value of the gift. Under conditional gift, pledge, consideration, and unjust enrichment. Under civil fraud, the remedies are more punitive, including potential criminal sentence.

---

133 See Section IV.A, infra.
enrichment, the donor—at the very best—will recover the value of his gift. Under civil fraud, punitive damages are possible. However, now we turn to a darker and more serious type of judicial interference with romantic gifts: criminal fraud. Criminal sanctions are clearly much more severe than civil penalties, and require higher standards of proof. Normally, in the course of romantic relationship, even where the donee is clearly benefiting financially form the donor, there is a chance that the donor is deriving utility from the relationship, and there is no victim. However, some cases are so egregious that perhaps more punishment is warranted—that the donee should be punished beyond the value of the gift, perhaps with time in prison.

While this may sound far-fetched, a federal court in the state of Washington has recently sentenced a woman to 46 months in prison for fraudulently soliciting and accepting gifts from her boyfriend. We will first explore the case, which is illustrative and provocative, and then consider the impact of such a sanction.

A. United States v. Shea Saenger

1. The Story of Norman Butler

Norman Butler had felt lost and lonely after the death of his wife, Mary, with whom he had spent over 55 years. But he was in good shape, financially: as a retired optometrist, he owned a house and had about $2.5 million dollars in trusts accounts. In 2005, at age 75, he began a long-distance relationship with a woman he met in an online dating website. The woman, Shea Saenger, was significantly younger than Butler, and resembled his ex-wife.

---

137 Leveritt, supra note 135.
couple enjoyed each other’s company, traveling together and going on cruises. \(^\text{138}\) Butler’s three adult children were happy that their dad “had found some romance in his life.” \(^\text{139}\)

However, the relationship was much more sinister than it first appeared to the Butler children. Starting at the very beginning of their courtship, Butler began giving gifts to Saenger. In 2005, he gave her $113,292. \(^\text{140}\) In the next few years, Butler’s mental health deteriorated as he began suffering increasingly from Alzheimer’s disease. \(^\text{141}\) During the same years, the gifts to Saenger escalated steadily—in 2006, Butler gave Saenger $169,667; in 2007, $391,622; in 2008, $686,559; and in 2009, $849,188. \(^\text{142}\) In the course of their romantic relationship—which lasted less than five years—Butler had given Saenger the bulk of his life’s savings of over $2 million dollars.

Apparently, these gifts were not given spontaneously. As Butler’s mental capacity declined, Saenger’s began to “deceive, manipulate, intimidate and threaten” him increasingly in order to take his money. \(^\text{143}\) Butler’s Alzheimer’s worsened and he began confusing Saenger with his deceased wife at times, and forgetting the amount of money he had already given her. \(^\text{144}\)

In the meantime, Saenger urged Butler to hide their correspondence involving these gifts, for example, asking him to delete emails because they were “private” and “our personal business anyway.” \(^\text{145}\)

\(^{144}\) Id. at 8.

\(^{145}\) Id. (Saenger proceeded to instruct Butler on how to delete emails, adding that she didn’t want his family to “question you or my love for each other.”)
In addition, Saenger made false promises of love, sex, and marriage and threats of abandonment and even criminal prosecution to induce gifts.146 Her lies were varied and detailed. She fabricated an ailing “Uncle Jimbo” who suffered from repeated strokes who needed his medical bills paid.147 She pretended to have various car problems148 and home repair issues.149 She offered nonexistent “fantastic investment opportunities” in land.150 She pretended to be harassed by multiple creditors.151 In 2009, she lied about having breast cancer, and asked for money for her operation.152 After Butler obligingly sent her money, she waited for a month for him to forget that he had already sent the money—the requested money for the operation again.153 She apparently executed several iterations of the breast cancer scam.154

It was not until Norman Butler’s son, Doug, was preparing his father’s 2009 tax return that he noticed the shocking state of his father’s financial condition.155 When asked, Norman Butler, showing clear signs of Alzheimer’s, “estimated” that he had given Saenger “a few hundred dollars.”156

Doug responded by hiring a private detective,157 who promptly uncovered alarming information about Saenger’s history. Saenger had arrest warrants issued for passing bad checks

8. Petitioner is entitled to recover his fees and costs incurred in this action pursuant to RCW 74.34.200(3) and RCW 1.96A.150.166

The Butlers had trouble recovering the money that Saenger had siphoned off to her relatives.167 Butler and his private investigator traced the money to relatives in Mississippi, Louisiana, and Arkansas.168

During the course of the lawsuit, Saenger had refused to answer questions asked by the judge, pleading her Fifth Amendment right.169 The Judge responded by placing Saenger in jail for contempt of court, where she stayed for several months, unwilling to cooperate.170 Meanwhile, the Butlers struggled financially, and had to put Norman Butler in an assisted-care facility.171 This was very upsetting for Doug Butler, who said that his father had saved his money in order to afford care at home.172 However, somewhat ironically, the family seemed to have befriended Art Saenger, Shea Saenger’s husband—even giving him full lifetime use of a modular home his wife had bought him with the stolen money.173

167 Leveritt, supra note 135.
168 Id. (“Despite Saenger’s silence, Butler and Winquist were able to trace quite a bit of what Saenger had done with the money. According to documents they’ve filed in various courts, she sent some of it to relatives in Mississippi and Louisiana. But according to the filings, she sent most of it to relatives in Arkansas: more than $1.1 million to her brother, Mark Lumpkin, a farmer in Phillips County, and his wife Rosemary; another $195,555 was sent to her niece Shannon Wiggins of Hazen — the same niece whose boyfriend Saenger (Sharon Lumpkin at the time) had killed in 1987.”)

170 Id. (“There is no blanket Fifth Amendment right to refuse to answer questions based on an assertion that any and all questions might tend to be incriminatory. The privilege must be claimed as to each question and the matter submitted to the court for its determination as to the validity of each claim”) (citing Eastham v. Arndt, 624 P.2d 1159 (1981). “Every Monday for weeks in early 2011—until the arrangement was changed to monthly—she was brought into court to reveal where the money went. Week after week, then month after month, she refused and was returned to her cell in the Kittitas County jail.”) Leveritt, supra note 135.
171 Leveritt, supra note 135 (“There was also the financial part. Norman Butler finally had to be moved into an assisted-care facility. That costs $1,900 a month. All but $200 of that is covered by his Social Security check. But medications cost another $400... ‘And,’ says Doug Butler, ‘...We plan to rent the house because now we’re burning through what capital he had left.’
172 Doug Butler emotionally expressed sadness and some remorse over having to put his father in an assisted living facility during his Victim Impact Statement at the conclusion of US v. Saenger.
173 Butler v. Saenger, No. 10-2-00430-3, Satisfaction of Judgment 10-9-00846-1, Superior Court of Washington in and for Kittitas County (May 6, 2011). See also Butler, supra note 155 (“Although Art has done
3. Criminal Charges and Prison Sentence

On July 9, 2010, the U.S. Postal Inspection Service received a tip from Doug Butler that Saenger had used the U.S. Postal Service to carry out her fraud.\textsuperscript{174} A U.S. Postal Inspector began investigating the claim.\textsuperscript{175} Aravind Swaminathan, an Assistant U.S. Attorney, took special interest in the case after speaking to Doug Butler and the other victims.\textsuperscript{176} On July 1, 2011, Saenger was charged with one count of Mail Fraud.\textsuperscript{177} The United States’ brief alleged that:

The essence of Shea Saenger’s scheme and artifice to defraud was to pretend to be romantically interested in and available to N.B., and then to obtain money and property from N.B. based on false and misleading representations regarding, among other things, that she was single and available to be married to N.B., that she had an ailing uncle who she was caring for, and that she had breast cancer and needed surgery. In fact, during the relevant time, Shea Saenger was married, and not romantically available, had no ailing uncle, and did not have breast cancer.\textsuperscript{178}

Because Saenger had used the United States Postal Service in some of her correspondence with Butler, her acts fell within the scope of the federal mail fraud statute. The United States noted that:

Saenger, having devised the above-described scheme to defraud, for the purpose of executing and in order to effect the scheme to defraud, did knowingly cause to

\textsuperscript{174} Pulkkinen, supra note 156 (“On July 9, 2010, the U.S. Postal Inspection Service received a complaint from a man who reported that his father, [Norman] Butler, had been swindled by the Coupeville woman he’d met online. The man’s son described his father as an aging optometrist who has since been diagnosed with Alzheimer’s disease. Butler’s son said he began investigating his father’s relationship with Saenger and came to believe she’d bilked about $2.2 million out of the man, a postal inspector told the court. The inspector noted that her own review of the transactions backed that claim.”)

\textsuperscript{175} See In the Matter of the Search of The residence located at 701 Main St. TRLR 63 Coupeville, Washington, Application for a Search Warrant, Case No. MJ10-539, United States District Court for the Western District of Washington, Dec. 15, 2010.

\textsuperscript{176} See U.S. v. Saenger, CR11 0223 RAJ, Information, Docket #1 (July 1, 2011) at 5. During his argument during Saenger’s Sentencing Hearing, he told Judge Jones that he had been the strongest proponent in his office of pursuing the charge as a federal offense because his conversations with the victims resonated with him.

\textsuperscript{177} See U.S. v. Saenger, CR11 0223 RAJ, Information, Docket #1 (July 1, 2011) at 1. See also Title 18, United States Code, Section 981(a)(1)(C); Title 28, United States Code, Section 2461(c).

\textsuperscript{178} U.S. v. Saenger, CR11 0223 RAJ, Information, Docket #1 (July 1, 2011) at 1–2.
be delivered by U.S. Mail, according to directions thereon, a check dated August 7, 2008, drawn on an account held by N.B. . . .  

Because Saenger had “used, or caused to be used, the U.S. Mail to carry out or attempt to carry out an essential part of the scheme,” the federal Mail Fraud Statute was relevant. Interestingly, had Saenger used a private mail service for her correspondence rather than USPS, she could have evaded the charge altogether.  

Saenger pled guilty two weeks thereafter. 

On January 6, 2012, Judge Richard Jones of the U.S. District Court for the Western District of Washington State sentenced Saenger to 46 months—almost four years—in prison. 

Although at the Sentencing Hearing, Saenger argued that her sentence should be reduced by the total number of days she spent in custody in Kittitas County Jail, in connection with the Butler v. Saenger lawsuit, and the United States did not object, the Judge declined to award credit for time served. 

The Judge also ordered Saenger pay restitution of $2,161,246.67. 

During the Sentencing, Saenger’s attorney argued that “[a]lthough the relationship was marred by Ms. Saenger’s exploitation,” that “exploitation was not the extent of the relationship. The relationship was real and meaningful” for both Saenger and Butler. 

Then Saenger shuffled

180 Let this be a lesson to anyone planning to commit long-distance fraud—use Fed-Ex or UPS instead of the USPS. See David Michael Cantor, “Bank, Mail and Wire Fraud (Federal Charge)”, available at http://dmcantor.com/fraud-theft-crimes/bank-mail-and-wire-fraud-federal-charge (last accessed Feb. 8, 2012) (“Private courier services such as Federal Express, PS, etc. do not satisfy the mail fraud statute”) (emphasis in original).
183 US v. Saenger, No. CR11-233RAJ, Plea Agreement, Dkt. #11 (July 15, 2011) at 9. The United States agreed in the plea agreement “at the time of sentencing to recommend a term of imprisonment no greater than the low-end of the United States Sentencing Guidelines Range as determined by the Court at the time of sentencing, but in no even lower than a term of imprisonment of forty-six (46) months. The government further agrees not to object to a recommendation by Shea Saenger that her sentenced by reduced by the total number of days she spent in custody in Kittitas County Jail, in connection with Butler v. Shea Saenger, No. 10-2-00430-3 (Superior Court for Kittitas County).”
185 The author was present at Saenger’s Sentencing Hearing in the US District Court for the Western District of Washington State. See also Levi Pulkkinen, “Killer Who Stole $2.2 Million from Elderly Man: I Love
to the podium in front of the Judge and said, “I would like for you to know that I love Norman Butler very much and I am sorry for what I have done to him.”

B. Criminal Sanctions and Romantic Gifts

1. A New, Intimate Type of Mail Fraud

The Saenger case is illustrative not only because it evokes strong sentiments about morality, but also because it is unprecedented. First, the only reason that Saenger was indicted was because she happened to use the United States Postal Service. This is perhaps one reason cases like Saenger are rare. Second, private exploitation cases like Saenger are not the typical target of 18 U.S.C. 1341. Mail fraud cases usually revolve around business—not personal—transactions. For example, the recent mail fraud defendants include Allen Stanford, who “bilked investors out of more than $7 billion, mostly through the sale of certificates of deposit, or CDs, from his bank,” Joseph Belasco, who defrauded Pepsi Bottling Group of nearly $3 million over a 10-year period, Gregory Viola, whose Ponzi scheme defrauded more than 50 investors, and Anthony Cutaia, for another Ponzi investment scheme. Perhaps most
famously, Andrew Fastow, the former CFO of Enron, was charged with mail fraud, among other things, in 2002. 192

Most mail fraud is executed rather impersonally, very often in a Ponzi scheme, very often in business transactions. The Saenger use of the mail fraud statute is strikingly different, because Saenger’s fraud was incredibly personal. Instead of targeting numerous faceless investors, she targeted one man—specifically, the man she claimed to love. 193 In the United States’ sentencing memorandum in Saenger, the government emphasized the strikingly personal nature of Saenger’s fraud:

Saenger lied about having breast cancer, a life threatening condition that takes thousands of lives every year. These lies were effective because most people would never imagine that anyone would ever lie about these circumstances. They were credible simply because they were uttered. Indeed, few would ever doubt a person’s claim that she, or her family member, were facing a life threatening illness. That is precisely what makes this crime so vile: Saenger lied about the kinds of things that tug at the heartstrings and engender true compassion. 194

The language of Judge Richard Jones also emphasized the personal nature of the crime. He told Saenger, “your greed superseded your professed concern for the victim. . . . The only real love interest you had was for his bank account. . . . Lust for unlimited access to his wealth.” 195

2. Effects of Criminal Sanctions for Gifts

Unlike the remedies of conditional gift, pledge, consideration, unjust enrichment, and restitution, a criminal sanction like mail fraud punishes the donee beyond the cost of the gift.

This has consequences for the ex ante considerations of the parties.

---

193 See text accompanying note 186.

195 The author was present at the Sentencing. See id.
Suppose that courts consider all romantic gifts to be irrevocable, like ordinary gifts. This means that when the donor gives his gift, he knows that he will not get it back, no matter what—even if the donee reneges on the relationship. As a result, his costs are higher. The signaling function of the gift is clearer: he believes the relationship will last; otherwise the investment would be wasteful to him.

In contrast, consider the conditional gift, pledge, or consideration regime.196 Under these legal regimes, the donor knows that if the relationship crumbles, he will be able to retrieve his romantic gift. This means that the gesture of the gift, the signaling function, is weaker here. A donor who spends a lot of money on a gift, while knowing that he will be able to retrieve the full gift upon dissolution of the relationship, is a much weaker signaler than a donor who does not have the same assurances. If both parties—donor and donee—are aware of this legal rule, then both will realize that the signaling function has been weakened, and the donor will have to find other ways to compensate in order to send a stronger signal.

Under an unjust enrichment regime,197 the signaling function of the gift is a little different. Because here the Court will take into account the behavior of both parties, and consider bad behavior, the donor is no longer guaranteed that his gift will be revocable. As a result, the gift has a better signaling function than it does under a conditional gift, pledge, or consideration regime because the donor’s gift is an investment in the relationship. Where there is a less than certain chance that the gift is revocable, the donor bears some expected loss upon dissolution of the relationship. Therefore, here, the gift is a better signaling function.

Under the fraud regimes, both civil and criminal (although the effects are much amplified in the criminal fraud case), the calculus is again different. We are no longer only considering the

196 See Section III.B.1–3, supra.
197 See Section III.C, supra.
incentives of the donor, but the focus is on the donee. In a proper case of fraud, by definition, the donor will not know, at the time the gift is given, that the donee has taken advantage of him. Therefore, while the donor is giving the gift, he is trusting the donee—at least to some extent. The donee, on the other hand, will be faced with a balance: she can accept the gift and benefit from the value of the gift, but on the other hand, if there is a chance of a civil or criminal sanction, she will have to take that into account, discounted by the probability that it will happen.

Under the regimes of conditional gift, pledge, consideration, and unjust enrichment, the donee who does not have any emotional attachment to the donor should nonetheless always accept the gift. Mathematically:

\[ E = (1 - p)G, \]

where \( E \) is the expected value of the donee’s gain, \( G \) is the value of the gift, and \( p \) is the probability that the donor will eventually take the donee to court under the conditional gift, pledge, consideration or unjust enrichment theories, and win. Clearly, because \( p \leq 1 \), \( E \) is always greater than or equal to zero.

However, if there is a chance that courts will impose sanctions as they did in \textit{Saenger}, the expected value of the donee does not always favor acceptance of the gift.

\[ E = G - q(G+S), \]

where \( E \) is the new expected value of the donee’s gain, \( G \) is the value of the gift, \( q \) is the probability that the donor will be sentenced to a sanction for fraud (such as punitive damages or jail time), and \( S \) is the severity of the punishment. The probability \( q \) is multiplied by \( (G+S) \) because if the court makes a finding of fraud, the court will certainly impose restitution. Here, \( E \) is not always guaranteed to be positive. Even if \( q \) is a small probability, \( S \) might be nonetheless

---

\(^{198}\) Fraud statutes vary in elements, but one requirement in every statute is that of some sort of deception; that the victim be deceived as to the falsity of the perpetrator’s promises.
quite large (for example, 46 months of jail time for Saenger). Therefore, under the fraud regime, there are some cases where the donee should actually turn down a gift.

Perversely, the harsher the sanction, the more reason a donee has for hiding the frequency or value of gifts. But as discussed below, discrete donors are more egregious threats than blatant donors. Or, conversely, donees will have to be particularly careful to maintain evidence that substantial gifts are not products of fraud. In some cases—in Saenger, for example—it is unclear that much more than circumstantial evidence is needed. The donor was mentally ill; much of the government brief’s discussed his Alzheimer’s diagnosis. The amount of money that Saenger received was substantial—$2 million, most of his life savings.

The Court does not really examine the utility that Butler received from his relationship with Saenger. Saenger’s attention was clearly valued by Butler, especially if he was lonely, yet there was no weighing of this value versus the costs to Butler. Perhaps such a weighing would be offensive to the moral senses. However, in some other case, it is possible for a donor to value a donee’s affections more than his entire life savings—that he would, quite romantically, be willing to give everything to her. The crux of the Saenger case, then, is perhaps Butler’s vulnerability. We do not know how much Saenger—even in the midst of her lies and manipulation—brightened Butler’s life. But we do know that, as social policy, we do not want to take the chance that the Saengers of the world will prey on the Butlers of the world.

C. Three Economic Paradoxes of Romantic Gift-Giving

There are three interesting economic paradoxes, or principles, in romantic gift-giving that are somewhat unexpected, but worth noting. First, non-cash gifts appear on first glance to be extremely inefficient because it involves guessing the desires of donees, but are nonetheless ubiquitous. Second, extremely inefficient gifts tend to be better signaling mechanisms than

---

199 See Section IV.C.3, infra.
efficient gifts in romantic relationships. Third, although the more blatant a “gold digger” is about her intentions the more social disapproval she may face, the more blatant a “gold digger” is, the more efficient the relationship is, and the less likely someone is being victimized.

1. The Paradox of Costly Non-Cash Gift-Giving

First, if consumers “know their own tastes and markets function smoothly, giver should give cash (if anything) rather than trying to guess the desires of receivers. But this prescription seems to betray the spirit of gift giving.” The paradox is that gifts are obviously very prevalent in our society.

This paradox has been addressed in much of economic and anthropological literature: gifts have intangible benefits—signaling and symbolic roles in relationships. As a signal, gifts, “are symbolic of some qualities of the gift givers or recievers”, “actions people take that convey meaning.” A “signaling equilibrium” results when expectations about what signals mean are fulfilled by behavior. As discussed previously, romantic gifts are valuable as signaling devices. One illustration of the use of gifts:

Consider an earnest young suitor, expecting a lifetime of familial production with his fiancée (given her consent); he will gladly “sink” the costs of a diamond ring and expensive dinners against the expected gains of join production, if he must, to convince her of his intentions and elicit her cooperation. The lusty bachelor whose planning extends only to dawn cannot afford such costly investments, ceteris paribus, since he expects less gain from a short-term relationship with his lady of that evening. In courtship situations like this, gift giving can sort potential partners according to their intentions (i.e., their investment plans). Furthermore,

---

201 See text accompanying n. 35–44. Note that a difference between the economists’ use of the term “signal” and the sociologists’ use of term “symbol” is that economic signals mean something because people who do not have the characteristics the signals convey cannot afford those signals, by definition. See Camerer, supra note 200 at S182. For example, if expensive gifts are used to signal the desire to pursue a long-term relationship, it is a valid signal only if opportunists who only wish to mimic the desire cannot purchase such expensive gifts because the cost is too high for a short-term relationship.

202 Camerer, supra note 200 at S182.

203 Id.
gift giving will often be reciprocal (though not always), because gifts are meant to spur investments that are reciprocal. . . . Potential mates or partners hope courtship gift giving is reciprocal, because in my model it takes two people to make a relationship.  

If we accept gifts as signaling mechanisms, we notice that some gifts are better signals than other gifts. Some signals are clear because of custom; for example, “[i]f flowers are what well-intentioned gentlemen give young ladies on first dates, then gentlemen give flowers in order to be thought of as well intentioned, even if young ladies would rather be cooked a meal or sung a song.” Another example of this is the diamond engagement ring—it is a very clear signaling device.

2. The Paradox of Inefficient Romantic Gifts

This leads us to the second paradox. Because gift giving is supposed to be somewhat reciprocal, inefficient gifts that are not worth as much to the donee may actually be better signals than efficient gifts—it is precisely the extravagance, the inefficiency, that signals the donor’s intentions. Generally, the more inefficient the gift is, the more obvious the signal is. For example, if a wealthy man offers to buy a woman a dress made of 9,999 real red roses, an extravagant mink fur coat, or the entire inventory of a Tiffany’s jewelry store, his romantic intentions are much clearer than if the same man gives the woman a year’s supply of food, even though the food would be much less wasteful. White elephant gifts, which are expensive but not useful, are useful signaling devices. Similarly, a wife might prefer a gift of a pretty locket

205 Id.
206 See id. (“Accepting an overpriced dinner instead of its cash equivalent has an opportunity cost to the receiver; so, incurring that cost is simultaneously a signal of the giver’s intentions and of the receiver’s intentions.”)
208 This is an extreme example because of the divergence of costs between an island, a fur coat, jewelry, and a casual lunch, but the lunch might be the most useful to the donee, especially if she is hungry and not in the mood to deal with the maintenance of owning an island.
(even if she seldom wears necklaces) to a gift of a new vacuum cleaner (even if she often vacuums) from her husband because of the signaling function of the romantic gift. While the vacuum cleaner is actually more efficient for the donor (it might contribute to his enjoyment of a clean house) and the donee (she may be tired of her old vacuum cleaner, and she would use it very often), the necklace is the preferred gift because it says something romantic.

Jewelry store advertising campaigns are established on this principle, with slogans like “Every kiss begins with Kay” and “diamonds are forever.” The implication is, of course, not only that diamonds are forever, but the gift donor’s love will last forever as well.

3. The Paradox of “Tasteful” Gold Digging

If inefficient, extravagant gifts signal intentions more clearly, the reflection of that problem is the question of how clearly the donee is signaling her intentions. For example, suppose that Donee begins a relationship with Donor because Donee is interested in the contents of Donor’s bank account. Donee can be more or less obvious about her reasons for entering the relationship. We can consider three simplified approaches adopted by Donee.

Most obvious. Donee might be very obvious about her intentions for dating Donor. She might tell Donor straight-out that she is only in the relationship for his money, or it may be a silent agreement between the two fully-informed parties. Either way, it will be obvious to the Donor why the Donee is pursuing the relationship. In this situation, Donor would know that Donee is with him for his money, and will choose his course of action with this information in mind. If Donor decides that Donee’s company is worth the financial cost, he will stay in the relationship. If he does not think Donee’s company is worth the cost, he will terminate the relationship. Economically, this is a completely pareto-optimal, mutualistic relationship. No
party is made worse off by the relationship because if either party were made worse off, they would terminate the relationship.\(^{209}\)

**Hints and implications.** On the other hand, Donee might not be too obvious about her intentions—she might consider herself too tasteful, or fear social disapproval too much, to admit her intentions outright. Perhaps she knows that being too obvious would scare away the Donor. So instead, she might hint at them, for example, consistently talk about the importance of gifts (“if you really loved me, you would buy me this”) to the point that an ordinarily prudent Donor would notice that she might not really love him.

It is possible, if Donor is not too prudent, that he is in a position where he is dating Donee, but if he were to find out her true intentions, he would have terminated the relationship. This is a possibly inefficient relationship caused by an information asymmetry. This is possibly not Pareto Efficient because Donor is worse off from being in the relationship even if Donee is better off. Depending on the specific instance, it may or may not be Kaldor-Hicks efficient.

**Subtlety.** Lastly, Donee might choose to be as subtle as she can about her intentions. Again, this may be a result of a desire to appear tasteful, or a fear of social disapproval. Donee might make the deliberate decision to pursue Donor for his money, but to hide this decision at all costs. Donee will insist consistently that she is with Donor for love, not money, or alternatively, Donor is mentally ill or debilitated in some way so that he cannot be expected to suspect Donee’s intentions.\(^{210}\) The key is that in this scenario, Donor does not know that Donee is with him for his money. Thus, he cannot adequately protect his own interests or evaluate whether Donee is worth dating; and will not terminate a relationship solely on account of Donee’s intentions.

\(^{209}\) This is assuming that both parties are rational. A possible critique is that in situations of romance, people are irrational and may pursue relationships that are detrimental to themselves. I am assuming that in those cases, they are deriving some sort of intangible utility from the relationship, from their inordinate fondness of the other party, or some other benefit—otherwise they would not be pursuing the relationship.

\(^{210}\) This is the situation exemplified in *US v. Saenger*. See Section III.A.
This last scenario runs the most significant risk of egregious conduct on the part of Donee, the most harm to Donor, and the most overall inefficient economic outcomes. If Donor is not aware of Donee’s intentions, he cannot gage whether her company is worth her cost. If the relationship turns out to be Kaldor-Hicks efficient, it would be by chance; most likely, the net gain to Donee would exceed the net harm to Donor because there is no extrinsic check on the amount of money Donee can demand from Donor.

D. Consequences of Court Interference

Consider the scenario of the subtle gold digger. Because this type of relationship—where the Donor is unaware of the Donee’s true motivations for staying with him—is the most likely to result in the victimization of Donor, the court’s harshest remedy, criminal fraud, should only be limited to these situations. Furthermore, because criminal fraud is the only approach that may actually change the ex ante incentives of the donee—and therefore may deter some efficient relationships that only appear inefficient to outsiders—it is an approach that should not be used in other types of cases.

When courts approach cases using the six theories of revocability (conditional gift,\(^{211}\) pledge,\(^{212}\) consideration,\(^{213}\) unjust enrichment,\(^{214}\) civil fraud,\(^{215}\) and criminal fraud\(^{216}\) ), they should consider whether the relationship is economical or not, instead of only considering the moral reprehensibility of a “gold digger.” Ordinarily, courts tend to punish a blatant “gold digger” more than a subtle one. Indeed, the more obvious that the donee is about her love for the donor’s money rather than for the donor himself, the more likely she is to be required to give up

\(^{211}\) See Section III.B.1, supra.
\(^{212}\) See Section III.B.2, supra.
\(^{213}\) See Section III.B.3, supra.

\(^{215}\) See Section III.D, supra.
\(^{216}\) See Section IV.A, supra.
the gift under unjust enrichment.217 The more obvious the gold digger is about her intentions, the more social disapproval she faces. Accordingly, women will often repeatedly publicly proclaim their love in public in efforts to dissuade the impression that they are gold diggers.218 Ironically, the more obvious a woman is about being a “gold digger”, the less morally reprehensible it is if she actually is one. Courts should take this into account when considering whether to punish a donee.

Under the five traditional theories, a potential “gold digger” will always have a positive expected value in venturing into a relationship because the worst case scenario, which occurs with a less than certain chance, is that the gifts will be returned, and she will have an outcome of zero. This is why the traditional five theories will not technically deter “gold diggers.”

However, if the courts begin enforcing criminal punishments with more frequency, this will result in a possibly negative expected value of additional punishment, including jail time. This might deter “gold diggers.”

However, this might also cause over-deterrence. When a party fears that she might appear predatory in a relationship, she might avoid it, even if she genuinely likes the other party. For example, younger women might avoid dating anyone old enough to possibly develop Alzheimer’s to avoid possible accusations of fraud from their family. Whether or not this would be desirable is a normative question, but it should be considered. But this is also why very

217 See discussion of Sharp v. Kosmalski and other cases, supra nn. 64-66 and accompanying text.
218 For example, Anna Nicole Smith has defended her intentions in several interviews. See, e.g., “Wedding Shockers: Odd Couples and Peculiar Pairings Cause Star-Watchers to Quake”, PEOPLE MAGAZINE (July 24, 1995), available at: http://www.people.com/people/archive/article/0,,20101169,00.html (“I'm very much in love,” Smith told an interviewer, flashing her asteroid-size 22-carat engagement diamond and her diamond-dusted wedding band after the June 27, 1994, nuptials. ‘I could have married him four years ago if I'd just wanted to get rich.’ Their interests spanned their half-century-plus age gap.”) Heather Mills McCartney has also repeatedly denied being a “gold digger.” “Heather Mills McCartney Denies She’s a ‘Gold Digger’” AFP (Nov. 22, 2012), available at http://www.breitbart.com/article.php?id=061122094150.6f5hob9h&show_article=1.
obvious signals of “gold diggers” are better than subtle ones—they lessen the risk of false positives.

I have argued above that subtle gold-digging is worse than blatant gold-digging, because there is a much greater chance of informational asymmetry. In cases of the biggest gaps of informational asymmetry, like in the facts of U.S. v. Saenger, the court imposes the harshest punishments. This seems to be the correct result in the Saenger case, although courts should be far more careful with the sixth theory—criminal fraud—than it is with the other five, because it does create the possibility of a negative expected value for parties seeking relationships.

V. CONCLUSION

There is a spectrum of theories available for cases where one lover allegedly takes advantage of another by inducing gift-giving. On one end of the spectrum are the non-fault based theories, which include conditional gift, pledge, and consideration. These mandate the return of the gift, because of the nature of the gift, not for any wrongdoing on the part of the donee. In the middle is unjust enrichment, which imputes some assumption of wrongdoing on the donee, although wrongdoing is not necessary. The remedy is the return of the gift, as well. Next is civil fraud, where the donee has definitely exhibited bad behavior, is at fault, and needs to return the gift as a result of that. Pushing the end of the spectrum is criminal fraud: in novel cases like Saenger, the donee is not only required to return the gift, but is also punished for her behavior beyond the cost of the gift with jail time or other fines.

While the Saenger outcome is not incorrect, it is striking and new, and deserves consideration. It is a quite different type of remedy because it imposes additional punishment on the donee. Taking this into account, a potential donee might actually find that pursuing a relationship will have a negative expected value, ex ante, which is different from under the traditional five remedies, which will always produce an expected value of at least zero. As a
result, criminal fraud may result in over-deterrence. In relationships where the parties differ greatly in financial status, the donee might fear punishment if she or he is perceived as taking advantage of the donor.

Although the more blatant a gold digger is about her intentions the more social disapproval she may face, the subtle gold digger is actually much more dangerous. A donee who is blatant about her intentions may face a much harder time finding a partner, but once established, the relationship is much less likely to be coerced, economically inefficient, or fraudulent. This suggests that the social forces dictating subtlety are actually detrimental to both donors and donees in romantic relationships. Thus, when courts decide to apply the harshest judgments against donees, they should only do so in situations where they are absolutely certain that the relationship and the gift-giving are not informed and consensual.

Punishment beyond the cost of the gift should be applied very sparingly, and only where the donor could not possibly have given informed consent for the gift. English poet Thomas Lodge wrote, “Love is a sickness full of woes.” Romantic relationships compel people to do things they would not ordinarily do, to suffer grievances they would not ordinarily suffer, and to give gifts they would not ordinarily give. Romantic gifts are often emotionally driven, and the legal battle over revocation emotionally charged. But while the courts should apply the law to protect donors from true fraud, it is not the role of the courts to protect donors from the manipulations of their partners, the entreaties of their lovers, or the generous whims of their own hearts.
